Moaaz H. Al Dakar

AI Engineer

+201021511115 | moaazeldakar@gamil.com | alexandria, Egypt | Open to Hybrid | LinkedIn | My Website

SUMMARY

Computer Science graduate from Egypt-Japan University of Science and Technology (E-JUST) specializing in Artificial Intelligence and Machine Learning. Skilled in developing intelligent systems, deep learning models, web applications, and mobile solutions. Experienced in applying AI techniques to real-world challenges through research, academic projects, and practical development. Passionate about building innovative, data-driven solutions and continuously expanding technical expertise in emerging technologies.

EXPERIENCE

Digital Egypt Pioneers Initiative - DEPI Nov '23 — Sep '24
Mobile Development Intern Remote

Participated in a hands-on mobile development internship focused on building Android and cross-platform applications.

- Developed mobile applications using Flutter.
- Integrated Firebase for backend services and data management.
- Built responsive, user-friendly mobile interfaces.
- Gained practical experience in cross-platform app development.

ISCHOOL Jul '25 — Sep '25
Cover Tuter Remote

Delivered engaging programming and technology lessons to students in Grades 4–6, fostering computational thinking, problem-solving, and creativity.

- Taught programming concepts through interactive lessons and hands-on projects.
- Mentored students and supported the development of practical technical skills.
- Encouraged collaboration, creativity, and continuous learning.
- Served as a Cover Tutor, providing on-demand instructional support and troubleshooting technical issues to ensure uninterrupted learning.

JANNAT APP Present
Head Of AI Department

Led the AI department at JANNAT, developing AI-powered solutions for palm tree disease detection to support early diagnosis and smarter agricultural decision-making.

- Led the development of AI models for palm tree disease identification.
- Contributed to building a prototype for early detection of palm health issues.
- Applied machine learning and computer vision techniques to agricultural challenges.
- Collaborated with cross-functional teams to deliver practical, user-focused solutions.

EDUCATION

Bachelor in Computer Science, Egypt-Japan University of Science and Technology Oct '22 — May '26

PROJECTS

Phonedizer Link Dec '23 — Jan '24

- Developed a modern, responsive e-commerce website for smartphone sales, offering detailed product pages, secure browsing, and a clean user experience.

- Implemented using HTML, CSS, and JavaScript, the site focuses on performance, accessibility, and intuitive navigation. Designed to showcase products attractively with smooth transitions and a layout optimized for both desktop and mobile users.

Engengineers Association Link Jul '23 — Aug '23

- Developed a fully responsive and accessible website for the Engineers Association, a non-profit initiative aimed at supporting and connecting engineers through resources, updates, and collaborative opportunities.
  The platform was built with modern front-end technologies, emphasizing clean UI, performance optimization, and ease of navigation. This volunteer project demonstrated both technical proficiency and a strong commitment to using web development skills for community impact.

ALAHRAM LAB Aug '25 — Sep '25

- Designed and developed a responsive website for AL AHRAM Medical Lab to showcase its diagnostic services and streamline communication with patients. The site features a clean, modern interface built with HTML, CSS, and JavaScript, highlighting services, lab technologies, and contact options. Focused on user accessibility, fast load times, and a professional visual identity to build trust and clarity for medical clients.

Audio Classification CNN Apr '25 — May '25

- Designed and implemented deep learning models (CNNs/RNNs) to classify environmental sounds using the ESC-50 and UrbanSound8K datasets.
  Explored feature extraction techniques (MFCC, log-mel spectrograms), applied transfer learning for improved performance, and conducted real-time classification experiments. Achieved high accuracy and improved model generalization through regularization and tuning.

Gesture-Controlled Smart Media & Presentation System Apr '26 — May '26

- Developed a computer vision-based application that uses hand gesture recognition, facial authentication, and emotion detection to control music playback and presentation slides in real time. Built with Python, MediaPipe, OpenCV, DeepFace, and Gradio for an interactive user experience.

Grand Egyptian Museum Data Scraping Platform May '26 — Jun '26

- Developed a web scraping application that automatically extracts and organizes artifact and exhibition data from the Grand Egyptian Museum website. Utilized Python, BeautifulSoup, Requests, and data processing techniques to collect, clean, and structure information for efficient access and analysis through a user-friendly web interface.

JANNAT Palm Disease Detection Prototype Present

- Developed an AI-powered prototype for automated palm tree disease detection and health assessment. As Head of the AI Department, led the design and development of a machine learning solution capable of analyzing palm leaf images and classifying multiple disease categories and nutrient deficiencies. The system provides real-time predictions, confidence scores, and recommended actions through an intuitive user interface, enabling faster and more accurate disease identification to support farmers and agricultural specialists in maintaining palm tree health.

SKILLS

Web Development HTML/CSS, ReactJS, UI/UX design

Programming Languages Python, C++, JS

Design & Presentation PowerPoint, Adobe Illustrator

machine learning ML, NLP, RAG, AI-generated content, Computer Vision

VOLUNTEERING

Web devoloper, Engengineers Association Jan '23 — Dec '24
